**DETAILED ACTION**

***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 20-30 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 20 is vague and indefinite because the recitation in the claim: "the one or more heat-dissipating cores comprising a material with a CTE between the CTE of the individual heat-dissipating cores to which the individual one or more electronic components is attached and the CTE of the heat-dissipating substrate" does not provide clear understanding which element having the CTE that is between the cores' CTE and the substrates' CTE.

***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 20-30 are rejected under 35 U.S.C. 103(a), as best understood, as being unpatentable over Krassowski et al. Pat. 6,758,263 in view of Mishima et al.

Krassowski discloses a heat sink 12 for dissipating heat from the component 14 comprising: a heat dissipating substrate 16 having an aperture 20 extending from a first

Art Unit: 2835

side to a second side, a heat dissipating stud 22 made of metal (col. 11, lines 22-30) attached within the aperture 20; the aperture is cylindrical or can be of any shape (col. 11, lines 51-55), the thin compliant layer isolating the heat-dissipating substrate and the stud, the surface of the stud or the aperture can be plated, the fins 36 are also disclosed. Krassowski discloses the claimed invention except the stud material having the CTE close to the CTE of the electronic component or intermediate between the CTE of the component and the heat dissipating substrate. Mishima discloses the heat sink with the inserted stud with the CTE close to the CTE of the electronic component or intermediate between the CTE of the component and the heat dissipating substrate. It would have been obvious at the time the invention was made to a person having ordinary skill in the art to choose the property of the materials as disclosed by Mishima in the structure disclosed by Krassowski et al. in order to provide optimum heat dissipation and integrity of the structure.
